COLOUR SELECTOR

UNDERSTAND YOUR CUBICLE

CREATING INCLUSIVE WASHROOMS

Colour and Contrast in Cubicle Design

Accessible washrooms are crucial for everyone, and careful colour selection plays a vital role in creating inclusive spaces. For partially sighted individuals, clear visual distinctions are paramount. Cubicle doors and walls should strongly contrast with surrounding surfaces, using Light Reflectance Value (LRV) differences to ensure visibility. A minimum LRV difference of 30 points for large surfaces like cubicle walls and doors is recommended, while hardware and signage require even greater contrast (60-70 points). This principle of contrast, ensuring elements stand out rather than blend, aids navigation and reduces confusion.

Beyond visual accessibility, colour choices also impact neurodiversity. Calm, muted tones like blues, greens, and neutrals create a less stimulating environment, promoting a sense of well-being. Avoiding bright, intense hues and opting for matte finishes minimises glare, creating a more comfortable sensory experience. Consistency in colour usage within the washroom, including cubicle design, fosters predictability and reduces visual clutter.

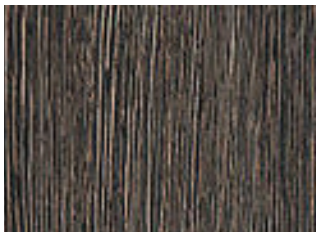

When selecting colours for washroom cubicles, consider both visual accessibility and neurodiversity. Prioritise high LRV contrast for those with sight loss, and opt for calming, matte finishes for neurodiverse users. By integrating these principles, we can create washrooms that are not only functional but also welcoming and inclusive for all.
